PIO(e)   **PIO(e)**

NAME

pio — physical I/O

SYNOPSIS

pio command

DESCRIPTION

The given command is executed using physical I/O to/from all files where possible. If physical I/O is not possible, the system does the appropriate side-buffering.

This command is useful for doing "check", "dd" and other UNIX type commands which make use of raw I/O, e.g.

pio dd if=/dev/rp0 of=/dev/mt0 ibsize=8192 obsize=4096 count=512.

SEE ALSO

cp(1), pcp(e), acp(e).
