NEQN (I)   **NEQN (I)**

NAME

neqn − typeset mathematics on terminal

SYNOPSIS

neqn [file] ...

DESCRIPTION

Neqn is an nroff (I) preprocessor. The input language is the same as that of eqn (I). Normal usage is almost always

neqn file ... | nroff

Output is meant for terminals with forward and reverse capabilities, such as the Model 37 teletype or GSI terminal.

If no arguments are specified, *neqn* reads the standard input, so it may be used as a filter.

SEE ALSO

eqn (I), gsi (VI)

BUGS

Because of some interactions with *nroff* there may not always be enough space left before and after lines containing equations.
