ABORT(III)   **ABORT(III)**

NAME
> abort — generate an IOT fault

SYNOPSIS
> **abort()**

DESCRIPTION
> *Abort* executes the IOT instruction. This is usually considered a program fault by the system and results in termination with a core dump. It is used to generate a core image for debugging.

SEE ALSO
> abd (I), signal (II)

DIAGNOSTICS
> usually "IOT trap -- core dumped" from the Shell.
